

MassMEP Technology Forum

Tuesday, September 22, 2009
Beechwood Hotel, Worcester, MA

Featured Topic: Get Ahead of Your Competition With Faster Product to Market Times

See the technology in action and learn how you can reduce costs and increase sales and productivity

Join us for a presentation of the revolutionary **KUBOTEK[®] KeyCreator System** featuring “Intelligent Geometry” technology and the unique **Validation Tool**. Kubotek’s KeyCreator software is used by manufacturing professionals to create new solutions, in a broad range of applications. The Validation Tool™ provides precise CAD model comparison for assurance of model integrity throughout the manufacturing supply chain.

The presentation includes a panel discussion with current users— **hear and see first-hand how it works.**

KeyCreator and Validation Tool Benefits:

- Improve the quality, quantity and speed of response to RFQs by using intelligent tools for ECO’s and data validation.
- Eliminate wasted time and money redrawing CAD models.
- Learn how to improve your productivity up to 10 times.
- Learn how to read more software programs with a single investment.
- See how you can reduce the number of CAD packages you support and still be able to read customer files.
- Keep your capital investment down.
- Benefit from explicit 3D CAD technology on the manufacturing floor that is easy to implement.

Event attendees will receive a free Demonstration Copy of KeyCreator and one attendee will receive a FREE Kubotek Spectrum MultiCAD viewer – a \$995 Value.

Program Schedule

7:30 am	Registration and Networking Breakfast
8:00 am	Intro to Technologies
10:00 am	Client Panel Discussion, they will share their experience with the software program
10:30 am	Q&A
11:00 am	Adjourn

Registration

Registration fee: \$25

About MassMEP

MassMEP partners with manufacturing organizations to help them achieve business excellence through proven performance-based training methods.

About Kubotek

The Kubotek Corporation Creation Engineering Division is the leading pioneer in 3D geometry-based engineering software. By utilizing its technology foundation in pure geometry, as opposed to model history/constraints, Kubotek delivers high value solutions and practical improvements to customer efficiency. Kubotek heavily invests in world-class research and development teams dedicated to building new technology to address current needs in today’s engineering community.

“KeyCreator is the easiest, fastest and most reliable tool for handling multiple file formats. In our business, we don’t have a choice in the format or geometry our customer sends. No matter what we get, KeyCreator software has no trouble handling the file, even in wireframe. Unlike other systems in use, KeyCreator allows us to start working immediately even if data is incomplete.”

Shawn Ramey
Alex Products, Inc.

When you compare the software’s powerful 3D capabilities, flexible approach and ease of use, we found KeyCreator is a contender when compared to other high end modelers,” said Basilius. “Because of the custom work and one-of-a-kind tooling we do, there is no way a history-based parametric system could help us. Flexibility and speed are key”

Scott Basilius
Basilius, Inc.
